Presentation Title:

Severity of permanent tooth impaction: Assessment, factors, and management.

Presentation Abstract:

Impaction is one of the most commonly prevalent dental anomaly in any population. An impacted tooth is a tooth that failed to erupt at the right time in the right position. Assessment of impacted teeth should be carried out to classify the severity of tooth impaction. Several factors might affect the severity of permanent tooth impaction. This lecture is reviewing the topic of assessment of impaction and presenting the factors that might affect its severity. In addition, number of clinical cases will be presented to discuss the management of this problem.

presentation outline:

1. Assessment of the severity of tooth impaction.
2. Factors that affect the severity of tooth impaction.
3. Diagnosis and clinical management
